

## Problem Set 23: Due Friday, May 10

**Problem 1:** Calculate

$$\begin{vmatrix} 3 & 0 & -2 & 1 \\ 4 & 0 & 2 & 0 \\ -5 & 2 & -8 & 7 \\ 3 & 0 & 3 & -1 \end{vmatrix}.$$

**Problem 2:** Show that

$$\begin{vmatrix} a & b & c \\ a+x & b+x & c+x \\ a+y & b+y & c+y \end{vmatrix} = 0$$

for all  $a, b, c, x, y \in \mathbb{R}$ .

**Problem 3:** Given  $c \in \mathbb{R}$ , consider the matrix

$$A_c = \begin{pmatrix} 1 & 1 & 1 \\ 1 & 9 & c \\ 1 & c & 3 \end{pmatrix}.$$

- Use a cofactor expansion to compute  $\det(A_c)$ .
- Find all values of  $c$  such that  $A_c$  is invertible. Explain.

**Problem 4:** Find the eigenvalues of the matrix

$$\begin{pmatrix} 1 & 0 & -1 \\ 0 & 2 & 2 \\ 3 & 4 & 1 \end{pmatrix}.$$

**Problem 5:** Find a basis for the eigenspace of the matrix

$$\begin{pmatrix} 1 & 4 & 1 \\ 6 & 6 & 2 \\ -3 & -4 & -3 \end{pmatrix}$$

corresponding to  $\lambda = -2$ .
